

Exciting Fireworks.

Big moments. Safe starts.

YOUR GUIDE TO MULTISHOTS, ROCKETS & FOUNTAINS

READ THE LABEL. KEEP THE DISTANCE.

Follow each firework's setup instructions and stated safety distances for firers and spectators. This guide does not replace them.

BEFORE YOU LIGHT

One responsible adult (18+); no alcohol. Prepare in daylight. Keep people clear of firing and falling-debris areas; avoid overhead obstructions and check the wind. Tell neighbours, keep pets indoors and supervise children. Have a torch and water ready. Keep unused fireworks boxed, away from flames and cigarettes.

01 / MULTISHOTS

Stand upright on flat ground and secure against tipping exactly as the label directs. For fan cakes, check the "this side to audience" marking. Keep the firing path clear. Never lean over the tubes.

02 / ROCKETS

Use a proper, securely fixed launch tube - never a bottle or your hand. The stick must move freely and must not be stuck in the ground. Follow the label's launch direction and keep the flight path away from spectators.

03 / FOUNTAINS

For outdoor ground fountains: stand upright on flat ground and secure as instructed so they cannot fall over. Keep the spark area clear of people and anything that can burn. Never hold a ground fountain.

LIGHT ONE AT A TIME. THEN STAND BACK.

Never lean over a firework. Light the fuse at arm's length with a taper; move immediately to the label's stated distance. Never throw fireworks or put them in pockets.

DID NOT GO OFF? DO NOT GO BACK.

A lit or failed firework may still explode. Keep everyone away. Do not attempt to relight it; ask the retailer or manufacturer for advice.

Afterwards: let spent fireworks cool completely, then soak them and debris overnight before appropriate disposal. Never put fireworks on a bonfire.
